RE: ML 45730-BSLS

Dear Mr. Truman:

On October 27, 2006 the Director cancelled the above numbered mineral lease for non-payment. You no longer have any right to mine or remove the leased substances from the leased lands. The leased lands contain the Courgraph rock quarry (DOGM #S/001/018) located in T30S, R14W, S36, SW4, the consisting of a steep cut in the hillside, a 1.5 acre level work pad, and a graveled access road. The Trust Lands Administration also owns the surface of said section 36.

It is the position of the Trust Lands Administration that the quarry site should be reclaimed only to the extent necessary to eliminate imminent safety hazards and to implement erosion controls. The mining face, work pad and access road should not be reclaimed, but should remain open to future mining activity should the property come under mineral lease to another party. Please work cooperatively with the Division of Oil, Gas & Mining in performing limited reclamation toward this end.

The Trust Lands Administration continues to hold your time CD#319440 in the amount of \$5,000.00 pending the resolution of reclamation and lease payment issues. Please contact me if you have any questions in this matter.

Sincerely,

John T. Blake  
Trust Land Specialist
